

Portfolio Concept Summary – 'Structured Mind'

Core Idea

A minimalist portfolio that quietly reveals complexity through interaction. The design reflects strategic thinking using an uneven, subtle grid system.

Grid System

An uneven, asymmetric grid with faint lines that are barely visible by default. Grid structure appears on hover, creating a sense of discovery without visual clutter.

Content Structure

Primary roles (visible): Fullstack/Web Dev, UI/UX, AI Projects, Photography. Secondary roles (revealed on interaction): IT Support, Network Engineering, Electrical Engineering, Multimedia.

Interaction Design

Hover: reveals title and short description. Click: expands selected item while fading others, showing detailed case structure.

Case Framework

Each project is presented using a clear structure: Problem → Thinking → Execution → Result. Content should remain concise and structured, avoiding long paragraphs.

Visual Direction

Minimal color palette (black/white + one accent color). Typography-driven hierarchy. Subtle motion and transitions.

Photography Integration

Used as background textures or hover elements instead of separate sections.

Positioning

Position yourself as someone who solves problems across systems—software, design, and infrastructure.
